Budget cuts claim Alaska agricultural stations

by Jeff Richardson / jr Richardson@newsminer.com

Dec 13, 2011 | 5353 views | 15 | 14 | |

Budget cuts are forcing the closure of Alaska's federal agriculture research station early next spring, including a newly built greenhouse facility in Fairbanks, seen here along Geist Road Tuesday afternoon, December 13, 2011. A roughly \$40 million cut to the Agricultural Research Service is resulting in the elimination of 10 stations throughout the country, said ARS spokeswoman Sandy Miller Hays. That includes all work currently underway in at the Subarctic ARS station in Alaska, including projects in Fairbanks, Palmer and Kodiak. Eric Engman/News-Miner

FAIRBANKS — Budget cuts are forcing the closure in spring of Alaska's federal agriculture research station, including a newly built \$1.2 million greenhouse and research complex in Fairbanks.

A roughly \$40 million cut to the Agricultural Research Service is resulting in the elimination of 10 stations throughout the country, said ARS spokeswoman Sandy Miller Hays. That includes all work under way at the Subarctic ARS station in Alaska, including projects in Fairbanks, Palmer and Kodiak.

The planned ARS closures stem from a spending bill passed by Congress in November that included a cut to the U.S. Department of Agriculture. The cut came with some warning — President Obama proposed the elimination of the stations in his budget proposal early this year.

About 10 federal employees throughout the state will be affected by the closure, USDA spokesman Matt Herrick said in an email. A number of University of Alaska Fairbanks students working and studying at the ARS station will also be out of work, said Carol Lewis, dean of the School of Natural Resources and Agricultural Science.

Lewis said the transfer of the five Fairbanks ARS employees to other stations in the Western United States could take effect as early as March but that the employees will have the option of retiring or leaving the service. While research would be able to continue until spring, she said, no additional field work will take place.

The Subarctic ARS station specialized in agricultural pest management, Lewis said, and a focus on insects, weeds and pesticides was largely avoided by UAF to prevent duplication. The Palmer station focuses on collecting northern plant samples, while the Kodiak office has studied techniques for using fish waste for agriculture.

"We tend to count on the ARS to fill positions that UAF doesn't have the funding to fill," Lewis said.

Herrick said ARS is still considering options for the use of its Alaska buildings after the closure. That includes the new greenhouse facility on Geist Road that opened last year to provide a year-round growing environment in Fairbanks.

Lewis said UAF will have a chance to acquire the building, but will first need to evaluate how it would be used and whether its operating costs can be absorbed. Equipment at the stations could be claimed by UAF if it isn't transferred to another ARS site.

Lewis said administrators also need to decide whether UAF should take over some of the research being done by ARS in Alaska.

"We're going to have to look at the whole package," she said. "Certainly, we're going to get together and see what can be done, but budgets are really, really tight at the university."

Lewis said she hopes the research service can eventually come back to Alaska. She said there's a precedent for a return, since its stations in Alaska were previously shut down in 1993 before being revived in 2000.

Lewis said there's a strong argument for ARS to maintain a research presence in Alaska, which has growing conditions unlike those seen anywhere else in the country.

"It leaves a huge hole," she said. "Not just from UAF, but from the farming community in general."

I really think the money the president makes needs to be cut 395,000 a year plus bennies is alot of money for one person.

You have to love how an article about higher education produces the most negative commits from those who lack it. Don't worry gang the earth is still flat and your relatives moved here not because they experienced "economic " or "social" failure in the lower 48, it was for the "huntin and fishin".

atvalaska | 14 Hours Ago

Looks like the typical 4- p -program....piss poor prior planning, more money down the tubes... no worry the union workers got their money to build it...the politicians earned a vote or two funding "there masses" and 50% of us pay for it.....

I've got to admit, it's worrisome when my posted comments (about the harassment and discrimination I endured while working for ARS) meet the NewsMiner's criteria for publication, but are suppressed anyway. See JusticeSleeps.com to read about the EEO cases. If it weren't true, the government would have succeeded in their Cease and Desist against the website. (Obviously, they failed.) The ARS Administrator really did rule (in writing) that a "hostile environment for women" and "discriminatory treatment" by an ARS supervisor are "nongrievable matters". (A shortage of funds may not be the only reason that Unit is being closed...)

After reading through your site it is clear that you were not happy there from the start. To make an opinion on whether or not justice was sleeping cannot be determined since your site is one sided. As a scientist you should know that not looking at all the evidence in any study results in inaccurate information.

JusticeSleeps | Less Than A Minute Ago

In reply to fsrdr,

Actually, I loved my job at the beginning. I stopped liking it after my career was attacked (repeatedly) while the male scientists were simultaneously treated better (e.g. more resources, permanent technical help, etc...). Theoretically, discrimination against women is unlawful in this country. My purpose in filling the website with actual ARS documents (which means that it wasn't "one-sided", as you suggest) was to preserve the facts about how the agency discriminated against all its women research scientists in Alaska (and got away with it).

teaparty patriot_2 | 19 Hours Ago

Sure the UAF can take over these federal Ag buildings. With a \$1.1 billion dollar budget that includes over one million dollars a day from the State of Alaska they shouldn't have any problems whatsoever. Also the Delta farmers that collect over \$1 million a year in farm subsidies can depend on the UAF for help. One good welfare bunch deserves another. They should work together just fine.

And on the \$1.2 million dollar greenhouse. The UAF has a much better one. At \$5.3 million this new greenhouse cost \$790 per square foot. That is about the most expensive greenhouse in the world on a square foot basis. Hospitals don't cost that much. The UA has the bucks because like I said they get a \$1 million dollar welfare check every day from the State of Alaska.

justasking | 17 Hours Ago

I built my (and my neighbor's greenhouse) out of scrap from the dumpsters, so almost free, I grow lots of food for almost no money, I plan another G/H this summer.

as to the fish fertilizer studies,,,been using fish waste as fertilizer for over 45 years,

-VanityMocker- | 19 Hours Ago

The USDA which makes loans to farmers and sponsors marketing campaigns to get Americans to eat eat eat, so that farmers can sell sell sell their commodities to pay back their loans, has reduced Americans into overweight blobs who can be found sitting in an Oprah Winfrey audience bobbing their heads up and down in agreement to whatever slop their television icon with a microphone tells them. I think the executive branch needs to trim back this agency more more more.

[Reply](#)

Miffed | 7 Hours Ago

Drying up your food resources at the local grocery store can be arranged, when these farmers go under. I don't have a problem with subsidies for the smaller farmer. What I have a problem with is the big corporate farms that suck up millions of dollars at a time, when their corporate profits should be footing the bill. Until you have lived and worked on a farm 24/7 and gone through what the smaller farmers go through, I think the remarks are uncalled for.

inupiatologist | 21 Hours Ago

Alaska as a whole is a, Research Exploring environment to challenge. Please consider to view SouthEast University T.V. Ad, It is the most unique, how to present Alaska. We do not have foreign insects yet, where we need to watch people from urban areas,infested with communicable disease. We got our ocean to explore,to spent that kind of money.

Crap.

[Reply](#)

mileder | 24 Hours Ago

Nice greenhouse, anyway. The SoA/UAF should take over the program. Lots of people in Fairbanks garden and would be happy to see this facility being used.

[Reply](#)

Miffed | 7 Hours Ago

Doubt that the people of Fairbanks or the surrounding area will ever benefit from this overpriced greenhouse, because somebody would have to provide upkeep. On top of that, someone is sure to bring up a liability issue, not to mention the fact that the "people" don't own it outright. What a flippin" waste of money and resources!

americanjoe | December 14, 2011

Yipppeee!

Finally a few government drones will lose their jobs and we can save a little money!
